EDUCATION

EPITECH Mulhouse
Programme Grande École · 2024 – Present
Information Technology Expert diploma (Master's level, 5 years). Currently 3rd year.

Lycée Jeanne d'Arc
Mulhouse · 2021 – 2024
General Baccalaureate with honors ("Mention Bien").

SKILLS

Languages
TypeScript, JavaScript, C, C++, C#, Python, Rust (basics)

Frontend & Web
React, Ant Design, HTML / CSS

Backend basics
Node.js, Prisma, SQLite

Testing & Tooling
Cypress, Git, GitHub, Jira, Agile

Graphics & Game
Unity (C#), C++ raytracing, SFML, raylib

SPOKEN LANGUAGES

French (native)
English (C1, one year in England)

INTERESTS

Street & nature photography, bouldering.

Yann Toison-Chabane

Software Engineer Student (3rd Year)

Third-year EPITECH student with production frontend experience (React, TypeScript) and a strong C++ background. Looking for a development internship (April – August 2027).

EMPLOYMENT HISTORY

Frontend Developer Intern — Aug. – Dec. 2025
AkorD, Mulhouse

- Member of a 7-person product team on **Kare**, a SaaS digitalizing fire-safety registers for public buildings (TypeScript monorepo, Domain-Driven Design).
- Shipped the public landing page (kare-app.fr), a reusable PDF / `.eml` attachment component, mobile technician intervention flows, and the AI anomaly-extraction UI.
- Rebuilt key Cypress regression tests; handled reviews, bug fixes, hotfixes, and the Oskare → Kare rebrand.
- **Stack:** React, TypeScript, Ant Design, Cypress.

Assistant EPITECH Région (AER) — 2026 – 2027
EPITECH Mulhouse

- Mentoring 1st- and 2nd-year students on C / C++ projects: code reviews, debugging, architecture, and methodology.
- Evaluating projects against EPITECH criteria with structured technical feedback.
- Running "Coding Clubs", programming workshops for high-schoolers.

PERSONAL & ACADEMIC PROJECTS

Sésame — 2026
BaselHack 2026, Adobe challenge "The Post-Website Business"
Team of 8. Sésame turns any website into an AI agent that other agents can query and book through, using BATP, an agent-to-agent protocol we designed for the event. I built the site-to-agent builder and the live bookings API. One jury member named it their favorite project.
Stack: Python, PostgreSQL, React, TypeScript, LLM tool use, MCP.

R-Type — 2026
Networked game & C++ engine (EPITECH)
Multiplayer R-Type-style shoot'em up on **AmpersandEngine**, the team's C++ game engine. I built its rendering, input, audio, scripting, scene manager, build system, and graphical editor.
Stack: C++, ECS, SFML, ImGui, Lua (sol2), Asio networking, CMake.

Zappy — 2026
Network Game Platform (EPITECH)
Three-binary team project (server, graphical client, AI player). Worked on the C++ server's network protocol, plus the client's protocol handling and 3D rendering with raylib.
Stack: C++, Python, TCP networking, raylib.

Animap — 2026
Mulhouse Zoo collaboration (Hackathon winning entry)
Team of 4. Visitor web app with interactive map, GPS routing, AR experience, and AI chatbot. Mainly built the AR experience. **Won the event.**
Stack: React, TypeScript, augmented reality, AI chatbot.
